Mick FANNING

[Professional Surfer]  
ASP/WCT  
World Champion in 2007

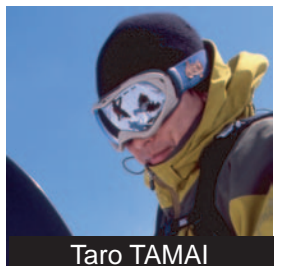

Jamie MITCHELL

[Lifeguard]  
Molokai to Oahu Paddleboard Race  
Champion for six consecutive years

Takuma DAN

[Professional MTB Rider]  
Kamikaze Downhill Specialist

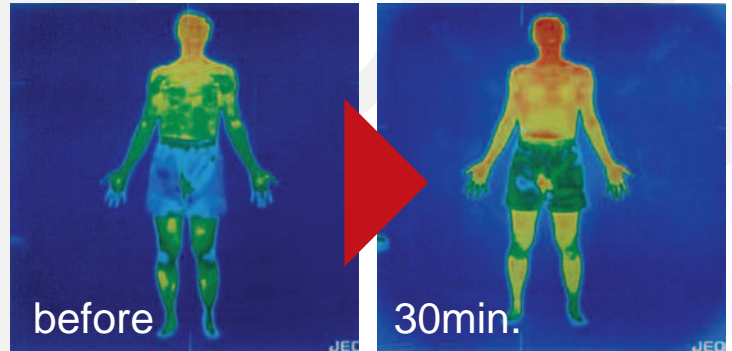

Taro TAMAI

[Professional Snowboarder]  
Backcountry Specialist

# Oligonol®

## 01 Quick warm-up

Oligonol reduces the warm-up time by improving peripheral blood circulation. Also it can improve oxygen and nutrients supply to peripheral tissue and promote pump-up effect if taken before exercise.

## 02 Strong muscle protection

Oligonol is manufactured through a proprietary manufacturing process that reduces the size of the polyphenol polymers making them easier to be absorb into the body (more bioavailable) compared to other conventional antioxidant compounds. Oligonol can protect muscles from oxidative stress damage at myocyte level.

## 03 Efficient energy use

Oligonol enhances the expression of adiponectin, a lipid metabolism hormone. It can inhibit excessive accumulation of fat, and improve the use of energy from sugar in muscles.

## 04 Quick recovery

Oligonol can improve energy supply to peripheral tissue and quicken its recovery from damages. A clinical study in 50 amateur athletes showed that Oligonol significantly reduced post exercise fatigue.
